INTRODUCING

## **WearMAX™** CARBIDE DRAG SHOES

WearMAX drag shoes are made with Mining Grade Carbide, one of the toughest, most durable metals produced today. It's specifically made to stand up to constant, abrasive wear conditions, like all sweeper shoes must endure ... hour after hour, mile after mile.

### **Nothing beats WearMAX for overall performance and lowest cost of ownership!**

- 3-year limited wear-out warranty
- No break-in period marking or streaking
- More carbide than many popular OEM shoes
  - Premium shoes at a standard price

### **Mining Grade Carbide is different.**

Insert grade carbide is forged with a shorter grain for hardness — ideal for use in cutting metals within the machine tool industry.

Mining Grade Carbide is made with larger grains for shear strength and shock resistance. It's used extensively for mining machinery that constantly cuts through rock and soil.

It's also ideal for handling the abrasive hammering that comes with use as inserts in sweeper drag shoes. Unlike insert grade carbide, Mining Grade Carbide is produced without any coatings that can compromise welding processes and lead to insert failures.

### **Increase your productivity.**

- Less sweeper downtime — more sweeper uptime
- Less labor time replacing worn or damaged shoes
- Less money spend on shoes over the long haul
- More time for technicians to tackle other critical equipment repairs

### **There's a WearMAX Mining Grade Carbide shoe for most sweeper makes and models**
